

Business Description

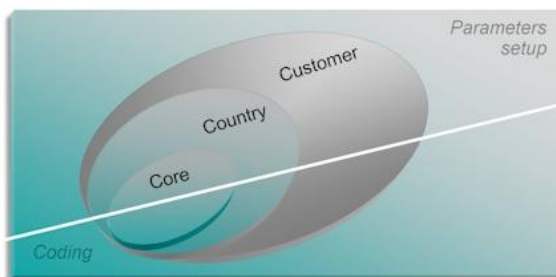

IBM and IDIT Technologies are partners in the insurance marketplace worldwide. IDIT™ Software Suite is an end-to-end enterprise insurance software platform which integrates the business capabilities essential for any insurance provider.

The benefits of the IBM-IDIT partnership are that insurance companies can enjoy:

- Fast time-to-market using parameter-based setup of new insurance products handling regulatory environment changes
- Improved distribution and channel management with parameter-based handling of the technical environment
- Increased efficiency using a single end-to-end solution that manages all insurance products globally
- Easy maintenance and integration with structured Service Oriented Architecture (SOA) component-based software

IDIT™ Software Suite capabilities:

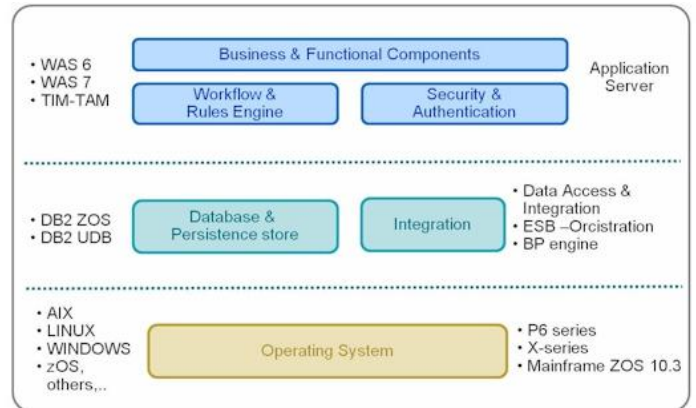

- IDIT™ is a SOA based solution that manages personal and commercial insurance products for traditional insurance, direct insurance, bancassurance and brokers markets.
- IDIT™ is a global software suite using international standards for multicompany, multi-branding, multi-currency and multi-lingual capabilities.
- IDIT™ is component-based with core, country and customer layers reducing the time and the effort required to deploy solutions in new countries. Core IDIT™ components do not vary and are independent of the highly specific country related parts of the application.

IDIT™ Core, Country and Customer layers

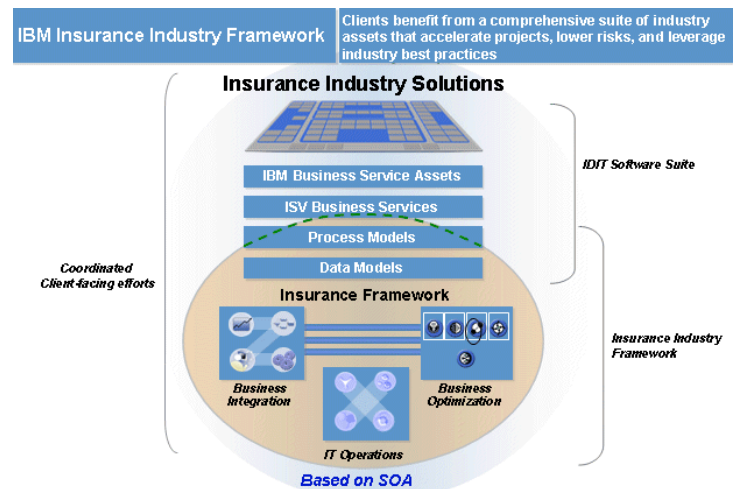

The complementary domain expertise of IBM and IDIT enhances the quality and functionality of solutions delivered to our customers. Our customers are asking for solutions based on industry standard products, and partnering with IBM meets that demand.

Technical Description

IDIT™ Software Suite has been certified as a Ready for SOA Specialty, DB2 and Tivoli solution. IDIT™ Software Suite runs on IBM DB2 and WebSphere Application Server under zLinux. The combination of IDIT™ software running on DB2, WebSphere and Tivoli provides blue-chip insurers with a cost-effective and highly scalable solution to grow their businesses.

The IBM-IDIT Solution runs on IBM's Insurance Industry Framework. The Insurance Framework is a foundation for many interlocking IBM solutions:
