

Océ PRISMA satellite for IDIT™ Software Suite

Increase output process efficiency

The easy way to generate customer-centric insurance documents

IDIT™ Software Suite is a SOA-based, comprehensive insurance software solution, which addresses traditional insurance, direct insurance, banc-assurance and brokers markets.

IDIT Software Suite generates many different documents for the customers of the insurance company. The flawless production of documents like contracts, coverage conditions, invoices, etc. is crucial. As an insurance company you want have complete control over, and insight in, the production of these documents, whether those are distributed to your customers on paper or digitally.

Océ Technologies has developed a dedicated Output Management module for IDIT Software Suite – Océ PRISMA® satellite for IDIT – to complement this comprehensive insurance software with professional output management capabilities.

The main benefits of Océ PRISMA satellite for IDIT are:

- Full control over document production.
- Monitoring and logging of all events in the document production, resulting in an auditable process.

- Increased flexibility in the composition of the documents, both in contents and in layout.
- Multi-channel communication. Documents can be produced as desired: on paper, sent via e-mail, fax and even SMS. And digitally archived, all at the same time.

Océ PRISMA satellite for IDIT in more detail

Océ PRISMA satellite is an intelligent output management system for transaction environments. It bridges the gap between the system that generates insurance related

output data and the output devices, like printers, e-mail servers or archiving systems.

Composition

The first step is that all document components from IDIT are converted into one standard format, PDF. The standardized components are collected and composed into one customer-centric document, containing all information in one bundle. The recipe for composition is defined in templates in IDIT. The composition will include standard text blocks, add digital forms and corporate house style elements like logos to the documents.

The separation of customer-specific document components, standard text and layout components, combined with the composition templates gives great flexibility: you can completely tune your customer communication to your own wishes. This includes after-processing such as adding optical instructions (OMR) for enveloping machines.

Use printer capabilities

Once the customer-centric document has been composed, Océ PRISMA satellite will add printer-specific commands if required. This allows the selection of paper from the correct input tray, selecting one- or two-sided printing, stapling and the application of all other features that your printers may have. You can maximize the benefits of the capabilities that are available in your printer and in your print room.

Manage production

Now the customer-centric document is ready, preparation for printing (or digital distribution) is done, and production can start. If desired the physical production of the documents can be managed by an operator. The operator console of Océ PRISMA satellite gives access to print queues and output devices, to set and change priorities, move jobs from one device to another or reschedule the production to a specific time window. Previewing of print jobs is also possible. The operator can exactly steer and monitor the production and you will have an optimal utilisation of your production devices.

Compliance

Océ PRISMA satellite for IFDIT will provide feedback about the status and progress of the print job, whether the production of the documents is executed automatically or with the intervention of an operator. All events are logged and the production of your business critical documents has created a perfect audit trail.

E-documents

Mixing output media is no problem. If you have customers that prefer to (also) receive their documents via e-mail you can realize this in Océ PRISMA satellite for IDIT. You don't need to change anything to your core systems, output production is organized by PRISMA satellite for IDIT.

With PRISMA satellite for IDIT you can be sure that documents are generated at the right device, at the right time and with the right content in the right formatting.

Océ Technologies

Océ is one of the world's leading providers of document management and printing for professionals. The broad Océ offering includes office printing and copying systems, high speed digital production printers and wide format printing systems for both technical documentation and color display graphics.

Océ is also a foremost supplier of document management outsourcing. Many of the world's Fortune 500 companies and leading commercial printers are Océ customers. The company was founded in 1877. With headquarters in Venlo, The Netherlands, Océ is active in over 90 countries, with fully owned operating companies in some 30 countries. In 2008 Océ achieved revenues of € 2.9 billion and employs some 23,000 people worldwide.

Océ PRISMA satellite has an installed base of almost a thousand licenses worldwide.

This output management software is supported by a dedicated competence center at the Océ Headquarters.
